

The Startup and E-Karma Centre of our college continues to be a hub of innovation, entrepreneurship, and skill development. Established with the vision of nurturing young minds to become job creators rather than job seekers, the Centre has been actively supporting students in developing ideas, building prototypes, and exploring entrepreneurial opportunities.

Through workshops, training programs, and hands-on projects, the Centre equips students with essential skills in innovation, digital empowerment, and business development. It also fosters collaborations with industry experts, ensuring that learners are connected to real-world practices and challenges.

The E-Karma initiative plays a crucial role in empowering students with digital skills, enabling them to participate in projects related to e-commerce, freelancing, and online platforms. This prepares them to become not only job seekers but also job creators, contributing to both local and global economies.

By integrating entrepreneurial learning with technology-driven opportunities, the Startup and E-Karma Centre continues to inspire students to think creatively, act confidently, and pursue their aspirations with determination. It stands as a testament to our college's commitment to innovation, skill development, and nation-building.
